

## Snowshoe HYBRID 2

Weight: 580g / 700g a pair S/M  
Area: 21x39cm / 22x42cm

Compact ultra-light snowshoe for hiking on moderate slopes. The shape and flexibility of the plates ensure a pleasant stride.

This hybrid concept allows the snowshoe to be used on its own or with snow crampons. This optimizes adaptation to variable snow conditions.

The TRAIL HYBRID is at ease on all types of terrain, whether you're hiking in the snow with friends, approaching alpine terrain or snowboarding. Lightweight, it's no longer a problem to carry in your backpack.

In size M, the load-bearing capacity is similar to that of conventional snowshoes, with added walking comfort and around 1kg less weight.

Ice crampons can also be fitted under the snowshoe for maximum grip, as with the TRAIL ALPI model.

To put on, cross the straps at the heel, then cross them again over the feet, passing them through the side straps.

Precautions for use :

SnowPlak snowshoes increase load-bearing capacity on loose snow, but should not be used on frozen or excessively steep slopes.
